

Transfield Services High Road Wind Farm

Fact Sheet

Project Location

Transfield Services is proposing to develop the High Road Wind Farm in the area of Evelyn, near the intersection of the Kennedy Highway and Tumoulin Road. It is anticipated that the \$200 million wind farm will include 30 to 40 wind turbines installed over an area stretching three kilometres west of the highway.

Choosing the Project Site

Transfield Services acquired the High Road Wind Farm from Stanwell Corporation in December 2007. Stanwell Corporation undertook a thorough site suitability assessment to identify a preferred location for the proposed wind farm.

The High Road site was chosen because of:

- Excellent wind resource;
- Proximity to an established electricity grid;
- Positive environmental factors; and
- Local community support.

What is Currently at the Site

The High Road Wind Farm site is predominately privately owned. The majority of the landowners use the site for agricultural purposes. The landowners lease the site to Transfield Services. The landowners are able to continue their agricultural operations in the area as the wind turbines will have very limited affect on their activities.
